

The Gas Station Mat

Specifications

August 2021

Description:

Made from a combination of durable SBR and reclaimed rubber materials, this rubber mat is a cost-effective and aesthetically pleasing solution for protecting your fuel sumps from physical harm, rain, and other contaminants. The mat features a diamond-plate style surface that helps provide more traction for any foot traffic going over the surface. The edge of this circular mat is beveled for added safety.

Material:

Styrene Butadiene Rubber (SBR), Reclaimed Rubber

Color:

Black

Weight:

26 lbs

Thickness:

9mm

Size:

4ft. in Diameter

Applications:

Fuel Sumps, Outdoor Areas, Anti-Slip, Equipment Protection, Floor Protection

Why Fuel Sumps?

Fuel sumps are an important part of the day-to-day operations of gas stations. Sumps are the access point where fueling trucks refill underground fuel storage tanks. In rainy conditions, water can flood the sump and start causing fuel leakage. It is costly and time consuming for the operators of the gas station to pump the water out. Placing this mat over the sump will prevent rain and other contaminants from getting inside the fuel storage tanks. The durability of the mat will also protect the top cover of the sump from physical harm such as vehicles driving over them.

Eco-Friendly Rubber:

This mat is an ecologically conscious product made from reclaimed rubber materials.

Traction:

The top part of the mat features a surface texture composed of a diamond-plate pattern. These protrusions are slightly raised from the surface, allowing for better grip and traction in case individuals have to step or walk over the mats surface.

Cleaning:

This mat is a low maintenance product that is very easy to clean. For best results, simply use a wet cloth or mop along with simple commercial cleaning soap. Please do not use caustic cleaning agents such as bleach.

Availability:

In Stock.

California Prop 65:
