

“Block-Grip” Rubber Stair Mats

Specifications
August 2021

Description:

These rounded step mats have a block-patterned surface texture that is designed to improve safety on stairways. Each step mat has a unique rounded half-moon shape that looks good in both commercial and industrial settings. When easy-to-install slip resistance is needed on any stairway, use these rubber stair treads.

Material

Reclaimed and Natural Rubber

Sizes:

9.75" x 29.75", 2.5 lbs per mat

Thickness:

3/16"-inch

Available Colors:

Black

Applications:

Anti-Slip, Commercial Stairways, Industrial Stairways, Outdoor Stairs, Workshop Stairs

Cobblestone Design:

Cobblestones date back to ancient times, with many pre-Roman cobbled streets dating back to the 3rd and 4th centuries. They've been used worldwide throughout history—mainly in Europe but also in Latin America—and are still in use and painstakingly maintained. Most strictly defined, cobblestones are rounded, water-worn stones used to pave streets. They were traditionally set in sand and sometimes bound with mortar, and there were many advantages to using them. Cobblestone streets did not develop ruts, nor did they get muddy or dusty, like dirt roads. Sand-set cobblestones make a permeable and “flexible” road surface; they don't crack with movements in the ground due to freezing and heaving.

Sustainable:

The “Block-Grip” stair treads are affordable, durable, and eco-friendly thanks to the natural and recycled rubber materials that make each step mat. “Sustainable” is a real term meant to describe products or actions that help sustain, and in some cases, protect this planet's resources, such as energy, water and air.

Traction:

These rubber step mats have a block-patterned texture on their surfaces, hence the name “Block-Grip”. This pattern helps to greatly increase the level of traction that people experience when going up and down the stairs. This type of pattern is ideal for keeping people safe on stairways that see high levels of foot traffic.

Safety:

When an area has more traction, the overall safety of the area also improves. Feet are safe and secure while standing on top of the traction-enhancing block-patterned surface texture.

Cleaning:

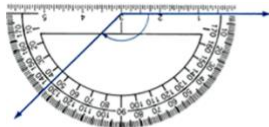

We recommend cleaning this product with water and common household cleaners. Strong, highly caustic cleaning solutions like bleach are not recommended.

Availability:

In Stock.
